

The Academic Phrasebank is a general resource for academic writers. It makes explicit the more common phraseological 'nuts and bolts' of academic writing.

Academic Phrasebank

A compendium of commonly used phrasal elements in academic English in PDF format

2014b edition

Dr John Morley

PDF Download version

Preface

The Academic Phrasebank is a general resource for academic writers. It aims to provide the phraseological 'nuts and bolts' of academic writing organised according to the main sections of a research paper or dissertation. Other phrases are listed under the more general communicative functions of academic writing.

The resource was designed primarily for academic and scientific writers who are non-native speakers of English. However, native speaker writers may still find much of the material helpful. In fact, recent data suggests that the majority of users are native speakers of English.

The phrases, and the headings under which they are listed, can be used simply to assist you in thinking about the content and organisation of your own writing, or the phrases can be incorporated into your writing where this is appropriate. In most cases, a certain amount of creativity and adaptation will be necessary when a phrase is used.

The Academic Phrasebank is not discipline specific. Nevertheless, it should be particularly useful for writers who need to report their empirical studies. The phrases are content neutral and generic in nature; in using them, therefore, you are not stealing other people's ideas and this does not constitute plagiarism.

In the current PDF version, additional material, which is not phraseological, has been incorporated. These additional sections should be helpful to you as a writer.

Contents

Introduction: About Academic Phrasebank	4 - 5
---	-------

Major Sections

Introducing work	7 – 12
Referring to literature	13 - 18
Describing methods	19 - 22
Reporting results	23 - 27
Discussing findings	28 - 31
Writing conclusions	32 - 34

General Functions

Being critical	36 - 38
Being cautious	39 - 40
Classifying and listing	41 - 42
Compare and contrast	43 - 44
Defining terms	45 - 46
Describing trends and projections	47
Describing quantities	48
Explaining causality	49 - 50
Giving examples as support	51 - 52
Signalling transition	53 - 54
Writing about the past	55 - 56

Notes on Academic Writing

Academic style	58 - 60
Commonly confused words	61 - 62
British and US spelling	63
Punctuation	64
Using articles	65 - 66
Sentence structure	67 - 68
Paragraph structure	79
Helpful tips for writers	70 - 71

About Academic Phrasebank

Theoretical Influences

The Academic Phrasebank largely draws on an approach to analysing academic texts originally pioneered by John Swales in the 1980s. Utilising a genre analysis approach to identify rhetorical patterns in the introductions to research articles, Swales defined a 'move' as a section of text that serves a specific communicative function (Swales, 1981,1990). This unit of rhetorical analysis is used as one of the main organising sub-categories of the Academic Phrasebank. Swales not only identified commonly-used moves in article introductions, but he was interested in showing the kind of language which was used to achieve the communicative purpose of each move. Much of this language was phraseological in nature.

The resource also draws upon psycholinguistic insights into how language is learnt and produced. It is now accepted that much of the language we use is phraseological in nature; that it is acquired, stored and retrieved as pre-formulated constructions (Bolinger, 1976; Pawley and Syder, 1983). These insights began to be supported empirically as computer technology permitted the identification of recurrent phraseological patterns in very large corpora of spoken and written English using specialised software (e.g. Sinclair, 1991). Phrasebank recognises that there is an important phraseological dimension to academic language and attempts to make examples of this explicit.

Sources of the phrases

The vast majority of phrases in this resource have been taken from authentic academic sources. The original corpus from which the phrases were 'harvested' consisted of 100 postgraduate dissertations completed at the University of Manchester. However, phrases from academic articles drawn from a broad spectrum of disciplines have also been, and continue to be, incorporated. In most cases, the phrases have been simplified and where necessary they have been 'sifted' from their particularised academic content. Where content words have been included for exemplificatory purposes, these are substitutions of the original words. In selecting a phrase for inclusion into the Academic Phrasebank, the following questions are asked:

- does it serve a useful communicative purpose in academic text?
- does it contain collocational and/or formulaic elements?
- are the content words (nouns, verbs, adjectives) generic in nature?
- does the combination 'sound natural' to a native speaker or writer of English?

When is it acceptable to reuse phrases in academic writing?

In a recent study (Davis and Morley, 2013), 45 academics from two British universities were surveyed to determine whether reusing phrases was a legitimate activity for academic writers, and if so, what kind of phrases could be reused. From the survey and later from in-depth interviews, the following characteristics for acceptability emerged. A reused phrase should:

- not have a unique or original construction;
- not express a clear point of view of another writer;
- depending on the phrase, may be up to nine words in length; beyond this 'acceptability' declines;
- may contain up to four generic content words (nouns, verbs or adjectives which are not bound to a specific disciplinary domain).

Some of the entries in the Academic Phrasebank, contain specific content words which have been included for illustrative purposes. These words should be substituted when the phrases are used. In the phrases below, for example, the content words in bold should be substituted:

- X is a major **public health** problem, and the cause of
- X is the leading cause of death in **western-industrialised countries**.

The many thousands of disciplinary-specific phrases which can be found in academic communication comprise a separate category of phrases. These tend to be shorter than the generic phrases listed in Academic Phrasebank, and typically consist of noun phrases or combinations of these. Acceptability for reusing these is determined by the extent to which they are used and understood by members of a particular academic community.

Further work

Development of the website content is ongoing. In addition, research is currently being carried out on the ways in which experienced and less-experienced writers make use of the Academic Phrasebank. Another project is seeking to find out more about ways in which teachers of English for academic purposes make use of this resource.

Major sections

Writing Introductions

There are many ways to introduce an academic essay or short paper. Most academic writers, however, appear to do one or more of the following in their introductions:

- establish the context, background and/or importance of the topic
- indicate an issue, problem, or controversy in the field of study
- define the topic or key terms
- state of the purpose of the essay/writing
- provide an overview of the coverage and/or structure of the writing

Introductions to research articles and dissertations tend to be relatively short but quite complex. Some of the more common moves include:

- establishing the context, background and/or importance of the topic
- giving a brief synopsis of the relevant literature
- indicating a problem, controversy or a knowledge gap in the field of study
- establishing the desirability of the research
- listing the research questions or hypotheses
- providing a synopsis of the research method(s)
- explaining the significance or value of the study
- defining certain key terms
- providing an overview of the dissertation or report structure
- explaining reasons for the writer's personal interest in the topic

Examples of phrases which are commonly employed to realise these functions are listed below. Note that there may be a certain amount of overlap between some of the categories under which the phrases are listed.

Establishing the importance of the topic for the world or society

X is a fundamental property of

Xs are fast becoming a key instrument in

X is a common disorder characterised by

X plays an important role in the maintenance of

Xs are the most potent anti-inflammatory agents known.

X is a major public health problem, and the main cause of

In the new global economy, X has become a central issue for

X is the leading cause of death in western-industrialised countries.

Xs are one of the most widely used groups of antibacterial agents and

X is increasingly recognised as a serious, worldwide public health concern.

X is an important component in the climate system, and plays a key role in Y.

In the history of development economics, X has been thought of as a key factor in

Establishing the importance of the topic for the discipline

A key aspect of X is

X is a classic problem in

A primary concern of X is

X is at the heart of our understanding of

X is an increasingly important area in applied linguistics.

Investigating X is a continuing concern within

Central to the entire discipline of X is the concept of
X and Y have been an object of research since the 1960s
X is a major area of interest within the field of

The past decade has seen the rapid development of X in many
The past thirty years have seen increasingly rapid advances in the field of
Over the past century there has been a dramatic increase in
X proved an important literary genre in the early Y community.
The changes experienced by Xs over the past decade remain unprecedented.
Xs are one of the most widely used groups of Y and have been extensively used for

Synopsis of literature

Previous studies have reported
Recent evidence suggests that
Several attempts have been made to
Studies of X show the importance of
A number of researchers have reported
Recently investigators have examined the effects of X on Y.
Factors found to be influencing X have been explored in several studies.
In the past two decades a number of researchers have sought to determine
A considerable amount of literature has been published on X. These studies
Surveys such as that conducted by Smith (1988) showed that
The first serious discussions and analyses of X emerged during the 1970s with
There have been a number of longitudinal studies involving X that have reported
Xs were reported in the first models of Y (e.g., Smith, 1977; Smith and Patel, 1977).
What we know about X is largely based upon empirical studies that investigate how
Smith (1984: 217) shows how, in the past, research into X was mainly concerned with

Highlighting a problem

However, a major problem with this kind of application is
Lack of X has existed as a health problem for many years.
However, these rapid changes are having a serious effect on
Despite its safety and efficacy, X suffers from several major drawbacks:
However, research has consistently shown that these students lack
There is increasing concern that some Xs are being disadvantaged
Despite its long clinical success, X has a number of problems in use.
Questions have been raised about the safety of prolonged use of
Along with this growth in X, however, there is increasing concern over

Highlighting a controversy in the field of study

To date there has been little agreement on what
One major issue in early X research concerned
The issue has grown in importance in light of recent

One observer has already drawn attention to the paradox in
More recently, literature has emerged that offers contradictory findings about
Debate continues about the best strategies for the management of
This concept has recently been challenged by X studies demonstrating
One of the most significant current discussions in legal and moral philosophy is
In many Xs, a debate is taking place between Ys and Zs concerning
The controversy about scientific evidence for X has raged unabated for over a century.
Questions have been raised about the safety of prolonged use of
The issue of X has been a controversial and much disputed subject within the field of
One major theoretical issue that has dominated the field for many years concerns
In the literature on X, the relative importance of Y has been subject to considerable debate.
The debate about X has gained fresh prominence with many arguing that

Highlighting inadequacies of previous studies

Researchers have not treated X in much detail.
Previous studies of X have not dealt with
Half of the studies evaluated failed to specify whether
Most studies in the field of X have only focused on
Most studies in X have only been carried out in a small number of areas.
The generalisability of much published research on this issue is problematic.
The experimental data are rather controversial, and there is no general agreement about
Such expositions are unsatisfactory because they
The research to date has tended to focus on X rather than Y.
Research on the subject has been mostly restricted to limited comparisons of
The existing accounts fail to resolve the contradiction between X and Y.

However, few writers have been able to draw on any systematic research into
However, much of the research up to now has been descriptive in nature
However, these results were based upon data from over 30 years ago and it is unclear if
Although extensive research has been carried out on X, no single study exists which
X's analysis does not take account of nor does he examine

Highlighting a knowledge gap in the field of study

What is not yet clear is the impact of X on
No previous study has investigated X .
There has been little quantitative analysis of
The neurobiological basis of this X is poorly understood.
Until recently, there has been no reliable evidence that
In addition, no research has been found that surveyed
Little is known about X and it is not clear what factors
This indicates a need to understand the various perceptions of X that exist among

So far this method has only been applied to
So far, however, there has been little discussion about
However, far too little attention has been paid to
However, the evidence for this relationship is inconclusive
However, much uncertainty still exists about the relation between
However, there have been no controlled studies which compare differences in
In contrast, very little is known about X in non-mammalian vertebrates and in

<p>Although While</p>	<p>some research has been carried out on X,</p>	<p>no single study exists which no studies have been found which no controlled studies have been reported. only two studies have attempted to investigate the mechanism by which has not been established. there have been few empirical investigations into</p>

Outlining the structure

The main questions/issues addressed in this paper are: a), b and c).

This paper has been divided into four parts. The first part deals with

The essay has been organised in the following way.

This paper reviews the evidence for

This paper begins by It will then go on to

The first section of this paper will examine

This paper first gives a brief overview of the recent history of X.

My thesis is composed of four themed chapters.

The overall structure of the study takes the form of six chapters, including this introductory chapter.

Chapter Two begins by laying out the theoretical dimensions of the research, and looks at how

The third chapter is concerned with the methodology used for this study.

The fourth section presents the findings of the research, focusing on the three key themes that

Chapter 6 analyses the results of interviews and focus group discussions undertaken during

The remaining part of the paper proceeds as follows:

The final chapter draws upon the entire thesis, tying up the various theoretical and empirical strands in order to

.... and includes a discussion of the implication of the findings to future research into this area.

Finally, the conclusion gives a brief summary and critique of the findings .

Finally, areas for further research are identified.

Explaining Keywords (refer to *Defining Terms*)

Throughout this paper, the term X will refer to

Throughout this dissertation, the term X will be used to refer to

In this article, the acronym/abbreviation XYZ will be used.

According to Smith (2002), X can be defined as follows: “....”

The term X is a relatively new name for, commonly referred to as

While a variety of definitions of the term X have been suggested, this paper will use the definition first suggested by Smith (1968) who saw it as

Referring to Literature

One of the distinguishing features of academic writing is that it is informed by what is already known, what work has been done before, and/or what ideas and models have already been developed. Thus, academic writers frequently make reference to external sources. In some cases, where the individual author is important, the author's name will be the main subject of the sentence; in other cases, the source may only be mentioned in brackets (...) or via a number notation system (e.g. footnotes and endnotes). The 'author as subject' style is less common in the empirical disciplines (sciences) and more commonly used in the humanities. The verbs and verb phrases typically used for referring to sources are listed below. Note that different referencing systems are used in different disciplines. In the examples given here, the Harvard in-text referencing system has been used.

The literature review: it is the purpose of the literature review section of a paper or dissertation to show the reader, in a systematic way, what is already known about the research topic as a whole, and to outline the key ideas and theories that help us to understand this. As well as being systematic, the review should be evaluative and critical of the studies or ideas which are relevant to the current work (refer to *Being Critical*). For example, you may think a particular study did not investigate some important aspect of the area you are researching, that the authors failed to notice a weakness in their methods, or that their conclusion is not well-supported.

A note on verb tenses: For general reference to the literature, the present perfect tense (have/has + verb + ed) tends to be used. For reference to specific studies carried out in the past, the simple past tense is most commonly used. This is always the case where a specific date or time in the past forms a part of the sentence. When referring to the words or ideas of writers, the present tense is often used if the ideas are still relevant, even if the author is no longer alive. The examples given below reflect these general patterns.

General descriptions of the relevant literature

A large and growing body of literature has investigated

Much of the current literature on X pays particular attention to

Over the past decade most research in X has emphasized the use of

There is a large volume of published studies describing the role of

In recent years, there has been an increasing amount of literature on

The generalisability of much published research on this issue is problematic.

During the past 30 years, much more information has become available on

A considerable amount of literature has been published on X. These studies

The first serious discussions and analyses of X emerged during the 1970s with

What we know about X is largely based upon empirical studies that investigate how

Describing Methods

In the Methods section of a dissertation or research article, writers give an account of how they carried out their research. The Methods section should be clear and detailed enough for another experienced person to repeat the research and reproduce the results. Where the methods chosen are new, unfamiliar or perhaps even controversial, or where the intended audience is from many disciplines, the Methods section will tend to be much more extensive. Typical stretches of text found in this section of a research article or dissertation along with examples of the kind of language used for these are listed below. Note that for most of the functional categories in this section, the verbs are written in the simple past tense.

Describing previously used methods

To date various methods have been developed and introduced to measure X:

In most recent studies, X has been measured in four different ways.

Traditionally, X has been assessed by measuring....

Different authors have measured X in a variety of ways.

Previous studies have based their criteria for selection on

The use of qualitative case studies is a well-established approach in

This test is widely available, and has been used in many investigational studies.

Case studies have been long established in X to present detailed analysis of

Recently, simpler and more rapid tests of X have been developed.

Radiographic techniques are the main non-invasive method used to determine

A variety of methods are used to assess X. Each has its advantages and drawbacks.

Data were gathered from multiple sources at various time points during

Giving reasons why a particular method was adopted or rejected

A case study approach was used to allow a

Qualitative methods offer an effective way of

A quantitative approach was employed since

The design of the questionnaires was based on

The X method is one of the more practical ways of

The semi-structured approach was chosen because

The X approach has a number of attractive features:

The second advantage of using the multivariate method is

For this study, the X was used to explore the subsurface

Smith et al. (1994) identify several advantages of the case study,

It was decided that the best method to adopt for this investigation was to

The study uses qualitative analysis in order to gain insights into

It was considered that quantitative measures would usefully supplement and extend the

Many of the distributions were not normal so non-parametric signed rank tests were run.

One advantage of the X analysis is that it avoids the problem of

The sensitivity of the X technique has been demonstrated in a report by Smith et al (2011).

However, there are certain drawbacks associated with the use of

The main disadvantage of the experimental method is that

A major problem with the experimental method is that

There are certain problems with the use of focus groups. One of these is that there is less

Indicating a specific method

X was prepared according to the procedure used by Patel et al. (1957).

The synthesis of X was done according to the procedure of Smith (1973).

X was synthesised using the same method that was detailed for Y, using

This compound was prepared by adapting the procedure used by Zhao et al. (1990).
An alternative method for making scales homogenous is by using
Samples were analysed for X as previously reported by Smith et al. (2012)

Describing the characteristics of the sample

Forty-seven students studying X were recruited for this study.
Of the initial cohort of 123 students, 66 were female and 57 male.
The initial sample consisted of 200 students, 75 of whom belonged to minority groups.
All of the participants were aged between 18 and 19 at the beginning of the study....
Two groups of subjects were interviewed, namely X and Y. The first group were
A random sample of patients with was recruited from
The students were divided into two groups based on their performance on
The project used a convenience sample of 32 first year modern languages students.
Just over half the sample (53%) was female, of whom 69% were
Participants were recruited from 15 clinics across, covering urban and rural areas
Eligibility criteria required individuals to have received
Eligible women who matched the selection criteria were identified by
Semi-structured interviews were conducted with 17 male offenders with a mean age of 38 years

A systematic literature review was conducted of studies that
Publications were only included in the analysis if
Articles were searched from January 1965 until April 2010.
All studies described as using some sort of X procedure were included in the analysis.

Indicating reasons for sample characteristics

A small sample was chosen because of the expected difficulty of obtaining
The subjects were selected on the basis of a degree of homogeneity of their
Five individuals were excluded from the study on the basis of
Criteria for selecting the subjects were as follows:
A comparison group of 12 male subjects without any history of X was drawn from a pool of

Describing the process: infinitive of purpose

In order to identify the T10 and T11 spinous processes, the subjects were asked to
In order to understand how X regulates Y, a series of transfections was performed.
To establish whether,
To measure X, a question asking was used.
To see if the two methods gave the same measurement, the data was plotted and
To control for bias, measurements were carried out by another person.
To rule out the possibility that X, the participants were
To determine whether, the cells were incubated for
To enable the subjects to see the computer screen clearly, the laptop was configured with
To increase the reliability of measures, each X was tested twice with a 4-min break between
To compare the scores three weeks after initial screening, a global ANOVA F-test was used
The vials were capped with to prevent
In an attempt to make each interviewee feel as comfortable as possible, the interviewer

Describing the process: other phrases expressing purpose

For the purpose of height measurement, subjects were asked to stand
For the purpose of analysis, 2 segments were extracted from each
For the estimation of protein concentration, 100 µL of protein sample was mixed with

Describing the process: typical verbs in the passive form

The data *were normalised* using

Descriptive data *were generated* for all variables.

Data for this study *were retrospectively collected* from

Prompts *were used* as an aid to question two so that

The experiments *were run* using custom software written in....

Two sets of anonymised questionnaires *were completed* by

Significance levels *were set* at the 1% level using the student t-test.

A total of 256 samples *were taken* from 52 boreholes (Figure 11).

Data management and analysis *were performed* using SPSS 16.0 (2010).

Published studies *were identified* using a search strategy developed in

The experiments *were carried out* over the course of the growing period from

Injection solutions *were coded* by a colleague to reduce experimenter bias.

Drugs *were administered* by icv injection under brief CO₂ narcosis;

The subjects *were asked* to pay close attention to the characters whenever

The pilot interviews *were conducted* informally by the trained interviewer

Blood samples *were obtained* with consent, from 256 Caucasian male patients

Independent tests *were carried out* on the x and y scores for the four years from

This experiment *was repeated* under conditions in which the poor signal/noise ratio was improved.

Article references *were searched* further for additional relevant publications.

The mean score for the two trials *was subjected* to multivariate analysis of variance to determine

Describing the process: sequence words and phrases

Prior to commencing the study, ethical clearance was sought from

Prior to undertaking the investigation, ethical clearance was obtained from

In the end, the EGO was selected as the measurement tool for the current study.

After 'training', the subjects were told that

After collection, the samples were shipped back to X in

After conformational analysis of X, it was necessary to

After the appliance was fitted, the patients attended X every four weeks.

After obtaining written informed consent from the patients, a questionnaire regarding the

Once the Xs were located and marked, a thin clear plastic ruler

Once the positions had been decided upon, the Xs were removed from each Y and replaced by

Once the exposures were completed, the X was removed from the Y and placed in

On completion of X, the process of model specification and parameter estimation was carried out.

On arrival at the clinic, patients were asked to

Following this, the samples were recovered and stored overnight at

Following correction for, X was reduced to

These ratings were *then* made for the ten stimuli to which the subject had been exposed

The analysis was checked when initially performed and *then* checked again at the end of

The subjects were *then* shown a film individually and were asked to

The soil *was then* weighed again, and this weight was recorded as

The results were corrected for the background readings and *then* averaged before

Finally, questions were asked as to the role of

In the follow-up phase of the study, participants were asked

Describing the process: adverbs of manner

The soil was then placed in a furnace and *gradually* heated up to

The vials were shaken *manually* to allow the soil to mix well with the water.

The medium was then *aseptically* transferred to a conical flask.
The resulting solution was *gently* mixed at room temperature for ten minutes and
A sample of the concentrate was then *carefully* injected into
The tubes were *accurately* reweighed to six decimal places using

All the work on the computer was carried out using Quattro Pro for Windows and
Data were collected using two high spectral resolution Xs.
The data was recorded on a digital audio recorder and transcribed using a
Semi-automated genotyping was carried out using X software and
Statistical significance was analysed using analysis of variance and t-tests as appropriate.
Comparisons between the two groups were made using unrelated t-tests.
Using the X-ray and looking at the actual X, it was possible to identify
Using an Anthos Micro plate Reader, we were able to separate single cells into different

Describing the process: giving detailed information

Compounds 3 and 5 were dissolved in X at apparent pH 2.5 to give concentrations of 4mM
.... and the solutions were degraded at 55°C or 37°C for a total time of 42 hours.
At intervals of 0.5 min, 50 µL of the X was aliquoted into 0.5mL of Y (pH 7.5) to

Indicating problems or limitations

In this investigation there are several sources for error. The main error is
Another major source of uncertainty is in the method used to calculate X.
In particular, the analysis of X was problematic.
Further data collection is required to determine exactly how X affects Y.
It was not possible to investigate the significant relationships of X and Y further because the sample size was too small.

Reporting Results

The standard approach to this section of a research article or dissertation is to present and describe the results in a systematic and detailed way. When reporting qualitative results, the researcher will highlight and comment on the themes that emerge from the analysis. These comments will often be illustrated with excerpts from the raw data. In text based studies, this may comprise quotations from primary sources. In quantitative studies, the results section is likely to consist of tables and figures, and writers comment on the significant data shown in these. This often takes the form of the location or summary statement, which identifies the table or figure and indicates its content, and a highlighting statement or statements, which point out and describe the relevant or significant data. All figures and tables should be numbered and given a title.

More elaborate commentary on the results is normally restricted to the Discussion section. In research articles, however, authors may comment extensively on their results as they are presented, and it is not uncommon for the Results section to be combined with the Discussion section under the heading: Results and Discussion.

Reference to aim or method

Changes in X and Y were compared using

Simple statistical analysis was used to

To assess X, the Y questionnaire was used.

To distinguish between these two possibilities,

T-tests were used to analyse the relationship between

In order to assess Z, repeated-measures ANOVAs were used.

Regression analysis was used to predict the

The average scores of X and Y were compared in order to

Nine items on the questionnaire measured the extent to which

The correlation between X and Y was tested.

The first set of analyses examined the impact of

To compare the scores three weeks after initial screening, a global ANOVA F-test was used.

A scatter diagram and a Pearson's product moment correlation were used to determine the relationship between

Highlighting significant data in a table or chart

It is apparent from this table that very few
 This table is quite revealing in several ways. First, unlike the other tables
 What is interesting in this data is that
 In Fig.10 there is a clear trend of decreasing
 As Table III shows, there is a significant difference ($t = -2.15, p = 0.03$) between the two groups.
 The differences between X and Y are highlighted in Table 4
 From the chart, it can be seen that by far the greatest demand is for
 From the data in Figure 9, it is apparent that the length of time left between
 From this data, we can see that Study 2 resulted in the lowest value of
 Data from this table can be compared with the data in Table 4.6 which shows

Statements of positive result

Strong evidence of X was found when
 This result is significant at the $p = 0.05$ level.
 There was a significant positive correlation between
 There was a significant difference between the two conditions
 On average, Xs were shown to have
 The mean score for X was
 Interestingly, for those subjects with X,
 A positive correlation was found between X and Y.
 The results, as shown in Table 1, indicate that
 A two-way ANOVA revealed that
 Post hoc analysis revealed that during
 Further analysis showed that
 Further statistical tests revealed

Statements of negative result

There was no increase of X associated with
 There were no significant differences between
 No significant differences were found between
 No increase in X was detected.
 No difference greater than X was observed.
 No significant reduction in X was found with Y compared with placebo.
 None of these differences were statistically significant.
 Overall, X did not affect males and females differently in these measures.

The Chi-square test did not show any significant differences between
A clear benefit of X in the prevention of Y could not be identified in this analysis.
Only trace amounts of X were detected in

Highlighting significant, interesting or surprising results

The most striking result to emerge from the data is that
Interestingly, this correlation is related to
The correlation between X and Y is interesting because
The more surprising correlation is with the

Interestingly, the X was observed to
Interestingly, there were also differences in the ratios of

Reporting a reaction

When X cells were stimulated with Y, no significant difference in the number of Z was detected
However, stimulation of X cells with Y did not increase the
Following the addition of X, a significant increase ($P < 0.05$) in the Y was recorded.
With successive increases in intensity of the X, the Y moved further to

Reporting results from questionnaires and interviews

The response rate was 60% at six months and 56% at 12 months.
Of the study population, 90 subjects completed and returned the questionnaire.
Thirty-two individuals returned the questionnaires.
By the end of the survey period, data had been collected from 64 individuals, 23 of whom were

This section of the questionnaire required respondents to give information on
Respondents were asked to indicate whether
Respondents were asked to suggest other reasons for
There were 53 responses to the question: '....?'
The total number of responses for this question was
The overall response to this question was poor.

In response to the question: '....?', a range of responses was elicited.
In response to Question 1, most of those surveyed indicated that
The overall response to this question was very positive.
When the participants were asked, the majority commented that
Other responses to this question included

The majority of those who responded to this item felt that
70% of those who were interviewed indicated that

Response	Percentage
Almost two-thirds of the participants	64%

Just over half of those who answered this question reported that
Over half of those surveyed reported that
Approximately half of those surveyed did not comment on

Response	Count
Of the 62 participants who responded to this question	30

Of the 148 patients who completed the questionnaire, just over half indicated that

A small number of those interviewed suggested that

Response	Percentage
Only a small number of respondents indicated that	
Some participants expressed the belief that	
One individual stated that '....' And another commented '....'	
A minority of participants (17%) indicated that	17%

One participant commented: '....'
Another interviewee alluded to the notion of

Observations about qualitative data

The themes of X and Y recurred throughout the dataset

Five broad themes emerged from the analysis.

Two discrete reasons emerged from this. First Second

A number of issues were identified

This theme came up for example in discussions of

A recurrent theme in the interviews was a sense amongst interviewees that ...

These views surfaced mainly in what respects

There was a sense of amongst interviewees

A variety of perspectives were expressed

A common view amongst interviewees was that

Issues related to X were not particularly prominent in the interview data.

In their accounts of the events surrounding

As one interviewee said:

As one interviewee put it:

For example, one interviewee said:

Talking about this issue an interviewee said:

Another interviewee, when asked ..., said:

The extract/comment below shows

Some interviewees argued that while others

Some felt that while others considered that

Two divergent and often conflicting discourses emerged

Whilst a minority mentioned that... all agreed that...

Transition statements

If we now turn to

A comparison of the two results reveals

Turning now to the experimental evidence on

Comparing the two results, it can be seen that

The next section of the survey was concerned with

In the final part of the survey, respondents were asked

Summary and transition

These results suggest that

Overall, these results indicate that

Together these results provide important insights into

Taken together, these results suggest that there is an association between

In summary, these results show that

The results in this Chapter indicate that The next Chapter, therefore, moves on to discuss the

Discussing Findings

The term discussion has a variety of meanings in English. In academic writing, however, it usually refers to two types of activity: a) considering both sides of an issue, or question before reaching a conclusion; b) considering the results of research and the implications of these. Discussion sections in dissertations and research articles are probably the most complex sections in terms of their elements. They normally centre around a 'statement of result' or an important 'finding'. As there is usually more than one result, discussion sections are often structured into a series of discussion cycles. The most common elements in these cycles, and some of the language that is typically associated with them, are listed below.

Note that when offering explanations and suggesting implications the language used is very tentative or cautious (refer to the section entitled *Expressing Caution*).

Background information: reference to literature or to research aim/question

As mentioned in the literature review,

The third question in this research was

Prior studies that have noted the importance of

An initial objective of the project was to identify

Very little was found in the literature on the question of

This study set out with the aim of assessing the importance of X in

The first question in this study sought to determine

It was hypothesized that participants with a history of

The present study was designed to determine the effect of

A strong relationship between X and Y has been reported in the literature.

In reviewing the literature, no data was found on the association between X and Y.

Statements of result: usually with reference to results section

The current study found that

The most interesting finding was that

In this study, Xs were found to cause

The results of this study show/indicate that

This experiment did not detect any evidence for

On the question of X, this study found that

The most important clinically relevant finding was

Another important finding was that

In the current study, comparing X with Y showed that the mean degree of

X provided the largest set of significant clusters of

It is interesting to note that in all seven cases of this study

The results of this study did not show that .../did not show any significant increase in

Unexpected outcome

Surprisingly, X was found to

What is surprising is that

One unanticipated finding was that

Surprisingly, no differences were found in

This finding was unexpected and suggests that

It is somewhat surprising that no X was noted in this condition

Contrary to expectations, this study did not find a significant difference between

However, the observed difference between X and Y in this study was not significant.

However, the ANOVA (one way) showed that these results were not statistically significant.

Reference to previous research: support

These findings further support the idea of
This finding confirms the association between
This study confirms that X is associated with
These results match those observed in earlier studies.
The results of this study will now be compared to the findings of previous work.
The findings of the current study are consistent with those of Smith and Jones (2001) who
These results are consistent with those of other studies and suggest that
This finding supports previous research into this brain area which links X and Y.
This finding corroborates the ideas of Smith and Jones (2008), who suggested that
This finding is in agreement with Smith's (1999) findings which showed

It is encouraging to compare this figure with that found by Jones (1993) who found that
Increased activation in the X in this study corroborates these earlier findings.
The present findings seem to be consistent with other research which found
This also accords with our earlier observations, which showed that
These results agree with the findings of other studies, in which
In accordance with the present results, previous studies have demonstrated that
The findings observed in this study mirror those of the previous studies that have examined the effect of
This study produced results which corroborate the findings of a great deal of the previous work in this field.
There are similarities between the attitudes expressed by X in this study and those described by (Smith, 1987, 1995) and Jones (1986).

Reference to previous research: contradict

However, the findings of the current study do not support the previous research.
This study has been unable to demonstrate that
However, this result has not previously been described.
In contrast to earlier findings, however, no evidence of X was detected.
These results differ from X's 2003 estimate of Y, but they are broadly consistent with earlier
Although, these results differ from some published studies (Smith, 1992; Jones, 1996), they are consistent with those of

Explanations for results

There are several possible explanations for this result.
A possible explanation for these results may be the lack of adequate
It is difficult to explain this result, but it might be related to
There are, however, other possible explanations.
These factors may explain the relatively good correlation between X and Y.
These differences can be explained in part by the proximity of X and Y.

Some authors have speculated that
A possible explanation for this might be that
Another possible explanation for this is that
This result may be explained by the fact that
It seems possible that these results are due to
This inconsistency may be due to
This discrepancy could be attributed to
This rather contradictory result may be due to

The observed increase in X could be attributed to
Since this difference has not been found elsewhere it is probably not due to

The observed correlation between X and Y might be explained in this way.
The reason for this is not clear but it may have something to do with
It may be that these students benefitted from
There are two likely causes for the differences between
The possible interference of X cannot be ruled out

Advising cautious interpretation

These findings cannot be extrapolated to all patients.
These data must be interpreted with caution because
These results therefore need to be interpreted with caution.
It is important to bear in mind the possible bias in these responses.
However, with a small sample size, caution must be applied, as the findings might not be transferable to
Although exclusion of X did not reduce the effect on X, these results should be interpreted with caution.

Suggesting general hypotheses

The value of X suggests that a weak link may exist between
It is therefore likely that such connections exist between
It can thus be suggested that
It is possible to hypothesise that these conditions are less likely to occur in
It is possible/likely/probable therefore that
Hence, it could conceivably be hypothesised that
These findings suggest that
It may be the case therefore that these variations
In general, therefore, it seems that
It is possible, therefore, that
Therefore, X could be a major factor, if not the only one, causing
It can therefore be assumed that the
This finding, while preliminary, suggests that

Noting implications

This finding has important implications for developing
An implication of this is the possibility that
One of the issues that emerges from these findings is
Some of the issues emerging from this finding relate specifically to
This combination of findings provides some support for the conceptual premise that
These findings may help us to understand
These results provide further support for the hypothesis that

Commenting on findings

However, these results were not very encouraging.
These findings are rather disappointing.
The test was successful as it was able to identify students who
The present results are significant in at least major two respects.
These findings will doubtless be much scrutinized, but there are some immediately dependable conclusions for
The results of this study do not explain the occurrence of these adverse events.

Suggestions for future work

Further work is required to establish this.

This is an important issue for future research.

Several questions remain unanswered at present.

There is abundant room for further progress in determining ...

Further research should be done to investigate the

Research questions that could be asked include

Future studies on the current topic are therefore recommended.

A further study with more focus on X is therefore suggested.

Further studies, which take these variables into account, will need to be undertaken.

In future investigations, it might be possible to use a different X in which

In further research, the use of this data as could be a means of

However, more research on this topic needs to be undertaken before the association between X and Y is more clearly understood.

Writing Conclusions

Conclusions are shorter sections of academic texts which usually serve two functions. The first is to summarise and bring together the main areas covered in the writing, which might be called 'looking back'; and the second is to give a final comment or judgement on this. The final comment may also include making suggestions for improvement and speculating on future directions.

In dissertations and research papers, conclusions tend to be more complex and will also include sections on significance of the findings and recommendations for future work. Conclusions may be optional in research articles where consolidation of the study and general implications are covered in the Discussion section. However, they are usually expected in dissertations and essays.

Restatement of aims

This paper has argued that

This study set out to determine

This essay has discussed the reasons for

The present study was designed to determine the effect of

The main goal of the current study was to determine

In this investigation, the aim was to assess

The purpose of the current study was to determine

This project was undertaken to design and evaluate

Returning to the hypothesis/question posed at the beginning of this study, it is now possible to state that

Summarising research findings

This study has shown that

The investigation of X has shown that

These findings suggest that in general

One of the more significant findings to emerge from this study is that

It was also shown that

This study has found that generally

The relevance of X is clearly supported by the current findings.

This study/research has shown that

The second major finding was that

The results of this investigation show that

The most obvious finding to emerge from this study is that

X, Y and Z emerged as reliable predictors of

Multiple regression analysis revealed that the

Suggesting implications

The evidence from this study suggests that

The following conclusions can be drawn from the present study

The results of this study indicate that

The results of this research support the idea that

In general, therefore, it seems that

Taken together, these results suggest that

An implication of this is the possibility that

The findings of this study suggest that

Significance of the findings or research contribution

This research extends our knowledge of

The present study makes several noteworthy contributions to

This work contributes to existing knowledge X by providing

The present study provides additional evidence with respect to
The current findings add to a growing body of literature on
The study has confirmed the findings of Smith *et al.* (2001) which found that
The findings from this study make several contributions to the current literature. First,...

These findings enhance our understanding of
The study has gone some way towards enhancing our understanding of
The X that we have identified therefore assists in our understanding of the role of
The empirical findings in this study provide a new understanding of
The key strengths of this study are its long duration and

This is the first study reporting an advantage in those who
This is the first time that X has been used to explore
This is the largest study so far documenting a delayed onset of
This study has demonstrated, for the first time, that
The analysis of X undertaken here, has extended our knowledge of
This research will serve as a base for future studies and
The methods used for this X may be applied to other Xs elsewhere in the world.
Taken together, these findings suggest a role for X in promoting Y.
The present study confirms previous findings and contributes additional evidence that suggests
This research has several practical applications. Firstly, it points to

Significance of the findings with a qualification

Whilst this study did not confirm X, it did partially substantiate
Despite its exploratory nature, this study offers some insight into
Although the current study is based on a small sample of participants, the findings suggest
Notwithstanding these limitations, the study suggests that

Limitations of the current study

Finally, a number of important limitations need to be considered. First,
The findings in this report are subject to at least three limitations. First,
Thirdly, the study did not evaluate the use of
The generalisability of these results is subject to certain limitations. For instance,

The most important limitation lies in the fact that
The major limitation of this study is the low response rate.
A limitation of this study is that the numbers of patients and controls were relatively small.
Several limitations to this pilot study need to be acknowledged. The sample size is
This limitation means that study findings need to be interpreted cautiously.

The current study has only examined
The current investigation was limited by
The current study was unable to analyse these variables.
The current research was not specifically designed to evaluate factors related to

The study is limited by the lack of information on
The scope of this study was limited in terms of
However, these findings are limited by the use of a cross sectional design.
The project was limited in several ways. First, the project used a convenience sample that
The sample was nationally representative of X but would tend to miss people who were
However, with a small sample size, caution must be applied, as the findings might not be transferable to

These results may not be applicable to
It is unfortunate that the study did not include

The main weakness of this study was the paucity of
An arguable weakness is the arbitrariness in our definition of
An issue that was not addressed in this study was whether....
A number of caveats need to be noted regarding the present study.
One source of weakness in this study which could have affected the measurements of X was
Although the study has successfully demonstrated that, it has certain limitations in terms of

Recommendations for further research work

This research has thrown up many questions in need of further investigation.
What is now needed is a cross-national study involving
More broadly, research is also needed to determine
More research is needed to better understand when implementation ends and
More research is required to determine the efficacy of

It would be interesting to assess the effects of
It would be interesting to compare experiences of individuals within the same
It is recommended that further research be undertaken in the following areas:
It is suggested that the association of these factors is investigated in future studies.

Further work needs to be done to establish whether
Further research is needed to account for the varying
Further research might explore/investigate
Further research in this field would be of great help in
Further research regarding the role of X would be worthwhile/interesting.
Further investigation and experimentation into X is strongly recommended.
Further experimental investigations are needed to estimate
A further study could assess the long-term effects of
Further research needs to examine more closely the links between X and Y.

Future trials should assess the impact of
Future research should therefore concentrate on the investigation of
A future study investigating X would be very interesting.
A number of possible future studies using the same experimental set up are apparent.
Another possible area of future research would be to investigate why

A natural progression of this work is to analyse
These findings provide the following insights for future research:
The precise mechanism of X in insects remains to be elucidated.
Considerably more work will need to be done to determine

The issue of X is an intriguing one which could be usefully explored in further research.
Large randomised controlled trials could provide more definitive evidence.
A greater focus on the X could produce interesting findings that account more for
More information on X would help us to establish a greater degree of accuracy on this matter.
If the debate is to be moved forward, a better understanding of X needs to be developed.
I suggest that before X is introduced, a study similar to this one should be carried out on

Implications or recommendations for practice or policy

Other types of X could include: a), b).
There is, therefore, a definite need for
Moreover, more X should be made available to
Another important practical implication is that
Unless governments adopt X, Y will not be attained.
These findings suggest several courses of action for
A reasonable approach to tackle this issue could be to

There are a number of important changes which need to be made.
Management to enhance bumble-bee populations might involve
A key policy priority should therefore be to plan for the long-term care of
This information can be used to develop targeted interventions aimed at
Taken together, these findings do not support strong recommendations to
An implication of these findings is that both X and Y should be taken into account when
The findings of this study have a number of important implications for future practice.

General functions of academic writing

Being Critical

As an academic writer, you are expected to be critical of the sources that you use. This essentially means questioning what you read and not necessarily agreeing with it just because the information has been published. Being critical can also mean looking for reasons why we should not just accept something as being correct or true. This can require you to identify problems with a writer's arguments or methods, or perhaps to refer to other people's criticisms of these. Constructive criticism goes beyond this by suggesting ways in which a piece of research or writing could be improved.

..... *being against is not enough. We also need to develop habits of constructive thinking.*

Edward de Bono

Introducing questions, problems and limitations: theory

A major criticism of Smith's work is that

One question that needs to be asked, however, is whether

A serious weakness with this argument, however, is that

One of the limitations with this explanation is that it does not explain why... .

One criticism of much of the literature on X is that

The key problem with this explanation is that

The existing accounts fail to resolve the contradiction between X and Y.

However, there is an inconsistency with this argument.

Smith's argument relies too heavily on qualitative analysis of

It seems that Jones' understanding of the X framework is questionable.

Smith's interpretation overlooks much of the historical research

Many writers have challenged Jones' claim on the grounds that

X's analysis does not take account of nor does he examine

Introducing questions, problems and limitations: method/practice

One major drawback of this approach is that

The main limitation of biosynthetic incorporation, however, is

However, this method of analysis has a number of limitations.

However, approaches of this kind carry with them various well known limitations.

Another problem with this approach is that it fails to take X into account.

Perhaps the most serious disadvantage of this method is that

Difficulties arise, however, when an attempt is made to implement the policy.

All the studies reviewed so far, however, suffer from the fact that

However, there are limits to how far the idea of/concept of X can be taken.

However, such explanations tend to overlook the fact that

However, one of the problems with the instrument the researchers used to measure X was

Nevertheless, the strategy has not escaped criticism from governments, agencies and academics.

Smith's study of X is considered to be the most important, but it does suffer from the fact that

Although this is the most comprehensive account of X produced so far, it does suffer from a number of flaws.

However, all the previously mentioned methods suffer from some serious

limitations
weaknesses
disadvantages
drawbacks.

Identifying a study's weakness

(However,)	<p>the main weakness of the study is the failure to address how</p> <p>the study fails to consider the differing categories of damage that</p> <p>the research does not take into account pre-existing such as</p> <p>the author offers no explanation for the distinction between X and Y.</p> <p>Smith makes no attempt to differentiate between various different types of X.</p> <p>Jones fails to fully acknowledge the significance of</p> <p>the paper would appear to be over ambitious in its claims.</p> <p>the author overlooks the fact that X contributes to Y.</p> <p>what Smith fails to do is to draw a distinction between</p> <p>another weakness is that we are given no explanation of how</p> <p>Smith fails to fully define what</p> <p>no attempt was made to quantify the association between X and Y.</p>

------------------------------------	---	--	--------------------------------------	--

Highlighting inadequacies of previous studies

Researchers have not treated X in much detail.

Previous studies of X have not dealt with

Such expositions are unsatisfactory because they

Most studies in the field of X have only focussed on

Most studies in X have only been carried out in a small number of areas.

The generalisability of much published research on this issue is problematic.

The experimental data are rather controversial, and there is no general agreement about

However, few writers have been able to draw on any structured research into

The research to date has tended to focus on X rather than Y.

The existing accounts fail to resolve the contradiction between X and Y.

However, these studies used non-validated methods to measure

Half of the studies evaluated failed to specify whether

However, much of the research up to now has been descriptive in nature

Although extensive research has been carried out on X, no single study exists which adequately

However, these results were based upon data from over 30 years ago and it is unclear if these differences still persist.

Introducing general criticism

Non-government agencies are also very critical of the new policies.

The X theory has been vigorously challenged in recent years by a number of writers.

These claims have been strongly contested in recent years by a number of writers.

Smith's meta-analysis has been subjected to considerable criticism.

The most important of these criticisms is that Smith failed to note that

Critics question the ability of poststructuralist theory to provide

More recent arguments against X have been summarised by Smith and Jones (1982):

Critics have also argued that not only do surveys provide an inaccurate measure of X, but the

Many analysts now argue that the strategy of X has not been successful. Jones (2003), for example, argues that

Introducing the critical stance of particular writers

Jones (2003) has also questioned why

However, Jones (2003) points out that

The authors challenge the widely held view that

Jones (2003) is critical of the conclusions that Smith draws from his findings.

Jones (2003) has challenged some of Smith's conclusions, arguing that

Jones (2003) is probably the best known critic of the X theory. He argues that

The latter point has been devastatingly critiqued by Jones (2003), who argues that

Other authors (see Harbison, 2003; Kaplan, 2004) question the usefulness of such an approach.

Smith's analysis has been criticised by a number of writers. Jones (1993), for example, points out that

Being Cautious

One of the most noticeable stylistic aspects of academic communication is the tendency for writers to avoid expressing absolute certainty, where there may be a small degree of uncertainty, and to avoid making over-generalisations, where a small number of exceptions might exist. This means that there are many instances where the epistemological strength (strength of knowledge) of a statement or claim is mitigated (weakened) in some way. In the field of linguistics, devices for lessening the strength of a statement or claim are known as hedging devices.

Analysis of research reports have shown that discussion sections tend to be particularly rich in hedging devices, particularly where writers are offering explanations for findings.

Devices that distance the author from a proposition

It is believed that

It is thought that

It is a widely held view that

It has commonly been assumed that

Smith (2001) holds the view that

According to Smith (2002),

If Smith's (2001) findings are accurate,

Many scholars hold the view that

Being cautious when giving explanations, hypothesising

These frequent storms	are almost certainly could be may be might be	due to climate change.
-----------------------	--	------------------------

It is almost certain that It is likely that It may be that It could be that It is possible that	the more extreme weather	is a result of climate change.
---	--------------------------	--------------------------------

A likely explanation A probable explanation A possible explanation	is that	these frequent storms	are a result of climate change.
--	---------	-----------------------	---------------------------------

Being cautious when reporting research

Based on the limited data available, ...

There is some evidence to suggest that X is associated with

Some studies have shown that X is less-effective when

Preliminary analysis suggests that there is a link between X and Y.

Initial observations suggest that there may be a link between

The findings from these studies suggest that X can have an effect on
 Preliminary findings point to the presence of
 The data that are emerging point to the presence of

Being cautious when discussing implications

These findings suggest that
 These results would seem to suggest that the
 The data appear to support the assumption that

Devices for avoiding over-generalisation

Ozone is toxic to	almost all most many types of the majority of certain types of some types of	living organisms.
-------------------	---	-------------------

Ozone levels	nearly always frequently often occasionally	exceed WHO levels in many cities.
--------------	--	-----------------------------------

Ozone tends to attack cells and break down tissues.
 There is a tendency for ozone to attack cells.

Being cautious when writing about the future

Severe weather	will almost certainly will probably is likely to could may might	become more common in the future.
----------------	---	-----------------------------------

It is almost certain that There is a strong possibility that It is likely that There is a possibility that There is a small chance that	the situation will improve in the long term.
---	--

Advising cautious interpretation of findings (Refer to Discussing Findings)

These data must be interpreted with caution because
 These results therefore need to be interpreted with caution.
 However, with a small sample size, caution must be applied, as the findings might not be
 These findings cannot be extrapolated to all patients.
 Although exclusion of X did not ..., these results should be interpreted with caution.
 It is important to bear in mind the possible bias in these responses

Classifying and Listing

When we classify things, we group and name them on the basis of something that they have in common. By doing this we can understand certain qualities and features which they shares as a class. Classifying is also a way of understanding differences between things. In writing, classifying is often used as a way of introducing a reader to a new topic. Along with writing definitions, the function of classification may be used in the early part of an essay, or longer piece of writing. We list things when we want to treat and present a series of items or different pieces of information systematically. The order of a list may indicate rank importance.

General classifications

X may be divided into	three main	classes sub-groups categories
-----------------------	------------	-------------------------------------

X may be classified	on the basis of according to depending on in terms of	Y	into Xi and Xii
---------------------	--	---	-----------------

It has become commonplace to distinguish 'passive' from 'active' forms of X.
 There are two main types of memory: declarative and non-declarative memory.
 Associative learning can be categorised into classical and operant conditioning.
 Bone is generally classified into two types: X bone, also known as ..., and Y bone or
 Systems theory distinguishes two different types of X, i.e. social and semantic Xs (Al-Masry 2013).

Aristotle's systematic treatises may be grouped in several divisions: logic, psychological works, physical
 The works of Aristotle fall under three headings: (1) dialogues and; (2) collections of facts and; and (3) systematic works.
 There are two basic approaches currently being adopted in research into X. One is the Y approach and the other is
 Generally, spectra typing provides two types of information: band intensity pattern and band number.

Specific classifications

In the US system, X is graded	according to whether on the basis of in terms of
-------------------------------	--

Smith (1966)	divided classified grouped	Xs	into two broad types: Xi's and Xii's
--------------	----------------------------------	----	--------------------------------------

Thomas (1996) describes	four basic kinds of validity:	logical, content, criterion and construct.
-------------------------	-------------------------------	--

Individuals were classified as belonging to upper or lower categories of
 Smith and Jones (2003) argue that there are two broad categories of Y, which are: a) and b)
 For Aristotle, motion is of four kinds: (1) motion which; (2) motion which; (3) motion which; and (4) motion which....
 To better understand the mechanisms of X and its therapeutic implications, Smith et al.(2011) classified X into 3 distinct types using

Introducing lists

This topic can best be treated under three headings: X, Y and Z.
 The key aspects of management can be listed as follows: X, Y and Z.
 There are three reasons why the English language has become so dominant. These are:
 There are two types of effect which result when a patient undergoes X. These are
 The disadvantages of the new approach can be discussed under three headings, which are:
 The “Three Voices for Mass” is divided into six sections. These are: the Kyrie, Gloria,
 Appetitive stimuli have three separable basic functions. Firstly, they Secondly, they
 During his tour of Britain, he visited the following industrial centres: Manchester, Leeds, and
 This section has been included for several reasons: it is; it illustrates; and it describes....
 The “Mass for Four Voices” consists of five movements, which are: the Kyrie, Gloria, Credo, Santus and Agnus Dei.

Referring to other people’s lists

Smith and Jones (1991) list X, Y and Z as the major causes of infant mortality.
 Smith (2003) lists the main features of X as follows: it is X; it is Y; and it has Z.
 Smith (2003) argues that there are two broad categories of Y, which are: a) and b)
 Smith (2003) suggests three conditions for its acceptance. Firstly, X should be Secondly, it needs to be.... Thirdly,

For Aristotle, motion is of four kinds: (1) motion which; (2) motion which; (3) motion which; and (4) motion which....

Comparing and Contrasting

By understanding similarities and differences between two things, we can increase our understanding and learn more about both. This usually involves a process of analysis, in which we compare the specific parts as well as the whole. Comparison may also be a preliminary stage of evaluation. For example, by comparing specific aspects of A and B, we can decide which is more useful or valuable. Many paragraphs whose function is to compare or contrast will begin with an introductory sentence expressed in general terms.

Introductory Sentences: Differences

X is different from Y in a number of respects.

X differs from Y in a number of important ways.

There are a number of important differences between X and Y.

Women and men differ not only in physical attributes but also in the way in which they

Smith (2003)	found observed	distinct significant notable considerable major only slight	differences between X and Y
--------------	-------------------	--	-----------------------------

Jones (2013) found dramatic differences in the rate of decline of X between Y and Z.

Areas where significant differences have been found include X and Y.

The nervous systems of X are significantly different from those of Y in several key features.

Introductory Sentences: Similarities

The mode of processing used by the right brain	is similar to that is comparable to that is comparable in complexity to that	used by the left brain
--	--	------------------------

There are a number of similarities between X and Y.

The effects of X on human health are similar to those of Y.

Both X and Y generally take place in a 'safe environment'.

Numerous studies have compared Xs in man and animals and found that they are essentially identical.

Comparison within one sentence

Oral societies tend to be more concerned with the present	whereas while	literate societies have a very definite awareness of the past.
---	------------------	--

Whereas While	oral societies tend to be more concerned with the present,	literate societies have a very definite awareness of the past.
------------------	--	--

In contrast to oral communities, it is very difficult to get away from calendar time in literate societies.

Compared with people in oral cultures, people in literate cultures organise their lives around clocks and calendars.

This interpretation	contrasts with that differs from that is different from that	of Smith and Jones (2004) who argue that
---------------------	--	---

Comparison within one sentence (comparative forms)

Women are faster/slower than men at certain precision manual tasks, such as

Women tend to perform better/worse than men on tests of perceptual speed.

Further, men are more/less accurate in tests of target-directed motor skills.

Women are more/less likely than men to suffer aphasia when the front part of the brain is damaged.

Adolescents are less likely to be put to sleep by alcohol than adults.

Women tend to have greater/less verbal fluency than men.

Men learned the route in fewer trials and made fewer errors than did women.

The corpus callosum, a part of the brain connecting the two hemispheres, may be more/less extensive in women.

Indicating difference across two sentences

It is very difficult to get away from calendar time in literate societies	By contrast, In contrast, On the other hand,	many people in oral communities have little idea of the calendar year of their birth.
---	--	---

Indicating similarity across two sentences

Young children learning their first language need simplified input.	Similarly, Likewise, In the same way,	low level adult L2 learners need graded input supplied in most cases by a teacher.
---	---	--

Defining Terms

In academic work students are often expected to give definitions of key words and phrases in order to demonstrate to their tutors that they understand these terms clearly. Academic writers generally, however, define terms so that their readers understand exactly what is meant when certain key terms are used. When important words are not clearly understood misinterpretation may result. In fact, many disagreements (academic, legal, diplomatic, personal) arise as a result of different interpretations of the same term. In academic writing, teachers and their students often have to explore these differing interpretations before moving on to study a topic.

Introductory phrases:

It is necessary here to clarify exactly what is meant by

This shows a need to be explicit about exactly what is meant by the word X.

X is a term frequently used in the literature, but to date there is no consensus about

There is a degree of uncertainty around the terminology in

Simple three-part definitions

A university is	an institution	where knowledge is produced and passed on to others
Social Economics may be defined as	the branch of economics	[which is] concerned with the measurement causes and consequences of social problems.
Research may be defined as	a systematic process	which consists of three elements or components: (1) a question, problem, or hypothesis, (2) data, and (3) analysis and interpretation of data.
Braille is	a system	of touch reading and writing for blind people in which raised dots on paper represent the letters of the alphabet.

General meanings or application of meanings

The term X refers to

The term X encompasses A), B), and C).

X can be defined as It encompasses

X can be loosely described as a correlation.

The term X has come to be used to refer to

The term X is generally understood to mean

The term X has been applied to situations where students

In the literature, the term tends to be used to refer to

The broad use of the term X is sometimes equated with

Whereas X refers to the operations of ..., Y refers to the

The term disease refers to a biological event characterised by

The term X is a relatively new name for a Y, commonly referred to....

In broad biological terms, X can be defined as any stimulus that is

Defined as XYZ, obesity is now considered a worldwide epidemic and is associated with

Indicating difficulties in defining a term

A generally accepted definition of X is lacking.

Unfortunately, X remains a poorly defined term.

The term X embodies a multitude of concepts which

In the field of language teaching, various definitions of X are found.

Smith (2001) identified four abilities that might be subsumed under the term X: a)

Although differences of opinion still exist, there appears to be some agreement that X refers to

X is a commonly-used notion in language learning and yet it is a concept difficult to define precisely.

Specifying terms that are used in an essay or thesis

In the present report, X was therefore defined in terms of

In this essay, the term X will be used in its broadest sense to refer to all

In this paper, the term that will be used to describe this phenomenon is X.

In this dissertation, the terms X and Y are used interchangeably to mean

Throughout this thesis, the term education is used to refer to informal systems as well as

While a variety of definitions of the term X have been suggested, this paper will use the definition

first suggested by Smith (1968) who saw it as

Referring to people's definitions: author prominent

For Smith (2001), fluency means/refers to

Smith (2001) uses the term 'fluency' to refer to

Smith (1954) was apparently the first to use the term

The term 'fluency' is used by Smith (2001) to refer to

Macro-stabilisation policy is defined by Smith (2003: 119) as '....'

This definition is close to those of Smith (2012) and Jones (2013) who define X as ...

In 1987, sports psychologist John Smith popularized the term 'X' to describe

According to a definition provided by Smith (2001:23), fluency is 'the maximally

Aristotle defines the imagination as 'the movement which results upon an actual sensation.'

One of the first people to define nursing was Florence Nightingale (1860), who wrote: '....'

Chomsky writes that a grammar is a 'device of some sort for producing the

Smith, has shown that, as late as 1920, Jones was using the term 'X' to refer to particular

The term 'matter' is used by Aristotle in four overlapping senses. First, it is the underlying

Secondly, it is the potential which

Smith et al. (2002) have provided a new definition of health: 'health is a state of being with physical, cultural, psychological

Referring to people's definitions: author non-prominent

Validity is the degree to which an assessment process or device measures what it is intended to measure (Smith et al., 1986)

Describing Trends and Projections

A trend is the general direction in which something is developing or changing over time. A projection is a prediction of future change. Trends and projections are usually illustrated using line graphs in which the horizontal axis represents time. Some of the language commonly used for writing about trends and projections is given below.

Describing trends

<p>The graph shows that there has been a Figure 2 reveals that there has been a</p>	<p>slight gradual slow steady marked steep sharp</p>	<p>increase rise decrease fall decline drop</p>	<p>in the number of divorces in England and Wales since 1981.</p>
---	--	---	---

Describing high and low points in figures

The number of live births outside marriage reached a peak during the second world war.

The peak age for committing a crime is 18.

Oil production peaked in 1985.

Gas production reached a (new) low in 1990.

Projecting trends

<p>The number of Xs The amount of Y The rate of Z</p>	<p>is projected to is expected to is likely to will probably</p>	<p>decline steadily drop sharply level off</p>	<p>after 2020.</p>
---	--	--	--------------------

Describing Quantities

The language for writing about quantities can be a complex area for non-native speakers because there are many combinations of short grammar words, such as prepositions and pronouns, and these can easily be confused. Many of the phrases given below also contain approximators such as: *nearly, approximately, over half, less than, just over.*

Describing ratios and proportions

The proportion of live births outside marriage reached one in ten in 1945.

The proportion of the population attending emergency departments was 65% higher in X than

Singapore has *the highest proportion* of millionaire households.

East Anglia had *the lowest proportion* of lone parents at only 14 per cent.

The annual birth rate dropped from 44.4 to 38.6 per 1000 per annum.

Describing fractions

Over half of those surveyed indicated that

Of the 148 patients who completed the questionnaire, *just over half* indicated that

Approximately half of those surveyed did not comment on

Nearly half of the respondents (48%) agreed that

Less than a third of those who responded (32%) indicated that

The number of first marriages in the United Kingdom fell *by nearly two-fifths.*

Describing percentages

The response rate was *60% at six months* and 56% at 12 months.

Returned surveys from 34 radiologists yielded *a 34% response rate.*

70% of those who were interviewed indicated that

Since 1981, England has experienced an *89% increase* in crime.

The mean income of *the bottom 20 percent* of U.S. families declined from \$10,716 in 1970 to

X found that of 2,500 abortions, 58% were in young women aged 15-24, *of whom 62% were*

He also noted that *less than 10% of the articles* included in his study cited

In 1960 *just over 5%* of live births in 1960 were outside marriage.

Describing averages

This figure can be seen as the *average* life expectancy at various ages.

The proposed model suggests a steep decline in *mean* life expectancy

Roman slaves probably had a *lower than average* life expectancy.

The average of 12 observations in the X, Y and Z is 19.2 mgs/m

The mean score for the two trials was subjected to multivariate analysis of variance to determine

The *mean income* of the bottom 20 percent of U.S. families declined from \$10,716 in 1970 to

Describing ranges

Estimates of X range from 200.000 to 700.000 and up to a million or more.

The respondents had practised for an average of 15 years (range 6 to 35 years).

The participants were aged 19 to 25 and were from both rural and urban backgrounds.

They calculated ranges of journal use from 10.7%–36.4% for the humanities, 25%–57% for

Rates of decline ranged from 2.71– 0.08 cm day (Table 11) with a mean of 0.97 cm day.

The evidence shows that life expectancy from birth lies in the range of twenty to thirty years.

Between 575 and 590 metres depth the sea floor is extremely flat, with an average slope of

The mean income of the bottom 20 percent of U.S. families declined from \$10,716 to \$9,833.

Explaining Causality

A great deal of academic work involves understanding and suggesting solutions to problems. At postgraduate level, particularly in applied fields, students search out problems to study. In fact, one could say that problems are the raw material for a significant proportion of academic activity. However, solutions cannot be suggested unless the problem is fully analysed, and this involves a thorough understanding of the causes. Some of the language that you may find useful for explaining causes and effects is listed below.

Verbs expressing causality

Lack of protein	may cause can lead to can result in	mental disability.
-----------------	---	--------------------

Scurvy is a disease	caused by resulting from stemming from	lack of vitamin C.
---------------------	--	--------------------

Much of the instability in X	stems from	the economic effects of the war.
------------------------------	------------	----------------------------------

Low levels of chlorine	can give rise to	high blood pressure.
------------------------	------------------	----------------------

Nouns expressing causality

The most likely causes of X are poor diet and lack of exercise.
 A *consequence* of vitamin A deficiency is blindness.
 X can have profound health *consequences* for older people.
 Physical activity is an important *factor* in maintaining fitness.
 Many other medications have an *influence* on cholesterol levels.
 Another *reason* why Xs have declined is that

Prepositional phrases expressing causality

200,000 people per year become deaf	owing to because of as a result of as a consequence of	a lack of iodine.
-------------------------------------	---	-------------------

Sentence connectors expressing causality

If undernourished children do survive to become adults, they have decreased learning ability.	Therefore, Consequently, Because of this, As a result (of this),	when they grow up, it will probably be difficult for them to find work.
---	---	---

Adverbial phrases expressing causality

Malnutrition leads to illness and a reduced ability to work in adulthood, The warm air rises above the surface of the sea,	thus thereby	perpetuating the poverty cycle. creating an area of low pressure.
---	-----------------	--

Other examples

X and Y are important driving factors of Z.

As a consequence of X , it appears that Y alone is not the causative factor of....

Extreme loneliness a risk factor for X.

X is almost as strong a risk factor for disability as Y.

X is generally seen as a factor strongly related to Y.

Due to X and Y, inflowing surface water becomes more dense as it

The mixing of X and Y exerts a powerful effect upon Z through

The study found that loneliness has twice the impact on early death as obesity does.

Loneliness can have profound health consequences for older people.

Possible cause and effect relationships expressed tentatively

This suggests a weak link may exist between X and Y.

The human papilloma virus is linked to most cervical cancer.

The use of X may be linked to behaviour problems in

There is some evidence that X may affect Y.

The findings indicate that regular exercise could improve cognitive function in people at risk of

It is not yet clear whether X is made worse by Y.

X may have been an important factor in

X may have contributed to the increase in

X may have played a vital role in bringing about

X may have been caused by an increase in

In the literature, X has been associated with Y.

X in many cases may be associated with certain bacterial infections.

A high consumption of X could be associated with infertility.

Giving Examples as Support

Writers may give specific examples as evidence to support their general claims or arguments. Examples can also be used to help the reader or listener understand unfamiliar or difficult concepts, and they tend to be easier to remember. For this reason, they are often used in teaching. Finally, students may be required to give examples in their work to demonstrate that they have understood a complex problem or concept. It is important to note that when statements are supported with examples, the explicit language signalling this may not always be used.

Examples as the main information in a sentence

A	well-known notable classic useful important	example of X is
---	---	----------------------

For example, the word 'doctor' used to mean a 'learned man'.

For example, Smith and Jones (2004) conducted a series of semi-structured interviews in

Young people begin smoking for a variety of reasons. They may, for example, be influenced by

An example of this is the study carried out by Smith (2004) in which

This is exemplified in the work undertaken by

Another example of what is meant by X is

The effectiveness of the X technique has been exemplified in a report by Smith et al (2010)

This distinction is further exemplified in studies using

This is certainly true in the case of

In a similar case in America, Smith (1992) identified

This can be seen in the case of the two London physics laboratories which

This is evident in the case of

The evidence of X can be clearly seen in the case of

X is a good illustration of

This can be illustrated briefly by

X illustrates this point this point clearly.

By way of illustration, Smith (2003) shows how the data for

These experiments illustrate that X and Y have distinct functions in

Examples as additional information in a sentence

Young people begin smoking for a variety of reasons, *such as* pressure from peers and the role model of parents.

Pavlov found that if some other stimulus, *for example* the ringing of a bell, preceded the food, the dog would start salivating.

In Paris, Gassendi kept in close contact with many other prominent scholars, *such as* Kepler, Galileo, Hobbes, and Descartes.

The prices of resources, *such as* copper, iron ore, oil, coal and aluminium, have declined in real terms over the past 20 years.

Many diseases can result at least in part from stress, *including*: arthritis, asthma, migraine, headaches and ulcers.

Reporting cases as support

Overall, these cases support the view that

This case has shown that

This has been seen in the case of

The case reported here illustrates the

This case study confirms the importance of

The evidence presented thus far supports the idea that

This case demonstrates how X used innovative marketing strategies in

As this case very clearly demonstrates, it is important that

This case reveals the need for further investigation in patients with

This case demonstrates the need for better strategies for

In support of X, Y has been shown to induce Y in several cases (Smith et al., 2001).

Recent cases reported by Smith et al. (2013) also support the hypothesis that

Signalling Transition

Previewing what is to follow in a paper or dissertation is like showing a map to a driver; it enables them to see where they are going. So it is useful to think of a preview section as a 'road map' for the reader. It must be accurate, but it must be easy to follow.

Writers are also expected to indicate to the reader when they are moving from one topic to another, or from one section of text to another. These are known as transition statements and examples of these, together with some previewing statements, are given below.

Previewing sections of text

This purpose of this chapter is to review the literature on X. It begins by

This introductory section provides a brief overview of It then goes on to

This part of the thesis discusses the findings which emerged from the statistical analysis presented in the previous chapter.

This chapter describes and discusses the methods used in this investigation. The first section The second part moves on to describe in greater detail the

The final chapter of this dissertation is divided into two parts. The first

This chapter is divided into four main sections, each of which presents the results relating to one of the research questions.

The structure and biological functions of Xs will be discussed in the forthcoming sections.

Introducing a new topic or aspect of a topic

As regards X,

With respect to X,

With regard to X,

Regarding X,

As far as X is concerned,

In terms of X,

In the case of X

Reintroducing a topic

As was pointed out in the introduction to this paper,

As was mentioned in the previous chapter,

As explained earlier,

As described on the previous page,

As discussed above,

Returning (briefly) to the (subject/issue) of X,

Moving from one section to the next

So far this paper/chapter has focussed on X. The following section will discuss

Before proceeding to examine X, it will be necessary to

Before employing these theories to examine X, it is necessary to

Having defined what is meant by X, I will now move on to discuss

Having discussed how to construct X, the final section of this paper addresses ways of

This section has analysed the causes of X and has argued that

The next part of this paper will

This chapter has demonstrated that

It is now necessary to explain the course of

Turning now to the experimental evidence on

This (chapter) follows on from the previous (chapter), which (examined/laid out/outlined) X.

Moving from one section to the next whilst indicating addition, contrast or opposition

In addition, it is important to ask

On the other hand, in spite of much new knowledge about the role of,

However, this system also has a number of serious drawbacks.

Despite this, little progress has been made in the

Previewing a following section

This raises questions about X which will be discussed in the next chapter.

The next chapter describes synthesis and evaluation of

The section that follows, it will be argued that

The following is a brief report on a

What follows is a description/outline/account of ...

The problem of X is discussed in the following section.

Transition statements for results and discussion

Turning now to the experimental evidence on

Comparing the two results, it can be seen that

A comparison of the two results reveals

As pointed out in the introduction to this paper,

From the previous discussion, it can be seen that

It is also worth noting that X is significantly more frequent in

The differences between X and Y are highlighted in Table 4.

Summary and preview

This section has reviewed the three key aspects of

This chapter has described the methods used in this investigation and it has

In this section, it has been explained thatThe chapter that follows moves on to consider the....

This chapter began by describing X and arguing that It went on to suggest that the The next chapter describes the procedures and methods used in this investigation

These analytical procedures and the results obtained from them are described in the next chapter

A summary of the main findings and of the principal issues and suggestions which have arisen in this discussion are provided in the next chapter, which ...

In the next section, I will present some of the findings of my empirical research on the impact of

Writing about the Past

Writing about the past in English is made difficult by the rather complex tense system. However, the phrases grouped below give an indication of the uses of the main tenses in academic writing. For a comprehensive explanation of the uses of the various tenses you will need to consult a good English grammar book. A good recommendation is *Practical English Usage* by Michael Swan, Oxford University Press.

Time phrases associated with the use of the simple past tense: specific times or periods of time in the past, completed

During the Nazi period, Between 1933 and 1945, From 1933 to 1945, In the 1930s and 1940s,	restrictions were placed on German academics.
--	---

For centuries, In the second half of the 19th century, At the end of the nineteenth century,	church authorities placed restrictions on academics.
--	--

Following World War I, In 1999,	Fleming actively searched for anti-bacterial agents. Fleming was named one of the <i>100 Most Important People</i> of the century.
--	---

Time phrases associated with the use of the present perfect tense: past and present connected

To date, little evidence has been found associating X with Y.

Up to now, the research has tended to focus on X rather than on Y.

Since 1965, these four economies have doubled their share of world production and trade.

So far, three factors have been identified as being potentially important: X, Y, and Z.

Until recently, there has been little interest in X.

Recently, these questions have been addressed by researchers in many fields.

In recent years, researchers have investigated a variety of approaches to X but

More recently, literature has emerged that offers contradictory findings about

The past decade has seen the rapid development of X in many

Over the past few decades, the world has seen the stunning transformation of X, Y and Z.

Over the past century there has been a dramatic increase in

The present perfect tense may also be used to describe research or scholarly activity that has taken place recently

Several studies have revealed that

Previous studies of X have not dealt with

A considerable amount of literature has been published on X.
There have been several investigations into the causes of illiteracy (Smith, 1985; Jones, 1987).
The new material has been shown to enhance cooling properties (Smith, 1985, Jones, 1987).
Invasive plants have been identified as major contributing factors for the decline of
The relationship between a diet high in fats and poor health has been widely investigated (Smith, 1985, Jones,

For reference to single investigations or publications in the past the simple past tense is used

In 1975, Smith et al. published a paper in which they described
In 1990, Patel et al. demonstrated that replacement of H₂O with heavy water led to
In the 1950s, Gunnar Myrdal pointed to some of the ways in which (Myrdal, 1957)
In 1981, Smith and co-workers demonstrated that X induced in vitro resistance to
In 1984, Jones et al. made several amino acid esters of X and evaluated them as

An experimental demonstration of this effect was first carried out by
The first experimental realisation of, by Smith et al. [12], used a
The first systematic study of the X was reported by Patel et al. in 1986.

Erythromycin was originally isolated from X in a soil sample from (Wang et al., 1952).
Smith and Jones (1994) were the first to describe X, and reported that
Thirty years later, Smith (1974) reported three cases of *Candida Albicans* which

Notes on academic writing

A note on academic style

The principal characteristics of written academic style are listed below.

1. Evidence-based

Perhaps the most important distinguishing feature of written academic style is that it is evidence-based. Writers support their arguments and claims with evidence from the body of knowledge relevant to their discipline. In addition, any research that is undertaken, must make reference to previous work in the field. As a result, academic texts are rich in attributions to other writers and references to previous research, as seen in the examples below:

- *Previous studies have shown that*
- *These sources suggest that from the fifth century onwards*
- *According to the 1957 Annual Medical report, the death of the 960 inhabitants of*
- *However, as has been shown elsewhere (e.g. Smith, 1992), the increase in*

For further examples, refer to the section on **Referring to the literature** in this document.

In addition, general propositions are usually supported with real examples.

- *This can be seen in the case of*
- *A good example of this can be found in*

2. Words of classical origin

Unlike everyday English, academic writing is characterised by a high frequency of words of classical origin (Greek and Latin). The main reason for this is that Latin was the *lingua academica* during the European renaissance; in other words, it was the international language of scholars. Even up until relatively recently, great works of science, such as Isaac Newton's *Philosophiæ Naturalis Principia Mathematica* (1687), were written in Latin. Even where academic texts were written in English, words of classical origin were used for concepts and phenomena for which there was no equivalent in English.

Although the *lingua academica* of today is English, writers of academic English still tend to use words which are derived from Latin, and also, mainly through Latin, from Greek.

everyday words		academic words
worry		concern
story		account
get rid of		eradicate
a lot of	→	considerable
not enough		insufficient
trouble		difficulty
big		significant
way (of doing)		method
bring together		synthesise
thing		object

There are also some changes to grammatical words (though these are not of classical origin):

everyday words	→	academic words
not much research not many studies isn't any evidence		little research few studies no evidence

3. Cautious

Academic writers are careful about the claims they make: they take care not to appear certain where some doubt may exist, and they are careful not to over-generalise. An example of this kind of transformation can be seen below. The second sentence is in academic style:

- *Drinking alcohol causes breast cancer in women.* →
- *Some studies suggest that drinking alcohol increases the risk of breast cancer.*

For more examples of this kind of language, refer to the section on **Being Cautious**.

4. Impersonal

In the interests of objectivity, academic writers tend to remove themselves from the writing. The focus is on 'what' happened, 'how' it was done and 'what' was found. The 'who' (the writer) is not normally given very much attention. This is one of the reasons why personal pronouns are ('I' and 'we') tend not to be used. In addition, academic texts rarely address the reader directly and the pronoun normally used for this, 'you', is avoided.

- *You could say that Churchill made some catastrophic decisions early in the War* →
- *It can be said that Churchill made some catastrophic decisions early in the War*

There are some exceptions: in certain disciplines, it may be appropriate for a writer to explain their personal interest in the research area. In some disciplines, the researcher may participate in the research as a participant-observer. In these cases, 'I' will be used. The example below, which illustrates the former situation, is taken from a dissertation in History.

I became interested in X after reading I hope to convey some of my fascination for the subject, as well as expressing my admiration of the artistic achievements of those involved

In research undertaken by teams, for example in medicine and science, it is common for the research to be reported using the personal pronoun 'we'.

5. Nominalisation

There is a tendency for academic writers to transform verbs (actions) into nouns. In the example below, the verb 'abandoned' becomes the abstract noun 'abandonment'.

- *Unwanted Roman children were generally abandoned in a public place.* →
- *The abandonment of unwanted Roman children generally occurred in a public place.*

As a result of this kind of transformation, academic writing is characterised by long noun phrase constructions, as in: 'the abandonment of unwanted Roman children'. In certain cases, these nominalised forms can become long and complex:

- *the effect of reducing aggressiveness by producing an ACTH-mediated condition of decreased androgen levels*

Although this kind of construction is considered normal in scientific writing, unless the reader is familiar with the constructions, it does make reading difficult as there are so many pieces of information to process in the one sentence. There is an argument that too much nominalisation should be discouraged.

6. Rhetorical questions

Questions to introduce significant new ideas are avoided, and are replaced with statements:

- *Is the welfare system good or not? →*
- *It is important to consider the effectiveness of the British welfare system.*

7. Contracted forms avoided

Contracted forms (e.g. *it's, don't, isn't, aren't*) should not be used in academic writing. The only exception would be if you retranscribing a recorded conversation or interview.

8. Precise and detailed

Last of all, one of the most noticeable features of academic writing is that it is very precise and detailed. This relates to the setting out and development of the thinking and the ideas as well as to the language used in the writing.

A note on commonly confused words

Your spell checker will only indicate words that are misspelt and which it does not recognise. However, if a misspelling results in a word which has another meaning or use, the spellchecker will not show this to you. Here is a list of words which are commonly confused:

Abbreviation/acronym

An *abbreviation* is a shortened form of a word or phrase. Usually, but not always, it consists of a letter or group of letters taken from the word or phrase. *Dr.* and *Prof.* are common examples. An *acronym* is an abbreviation formed from the initial components in a phrase or a word. These elements in turn form a new word: *NATO*, *Benelux*, *UNESCO*.

affect/effect

Affect is a verb, e.g. *A affects B*;

Effect is a noun and is therefore always used after an article/determiner ('an' or 'the'/'this'), e.g. *The Greenhouse Effect*.

compliment/complement

Compliment (verb) means to praise someone. *Complement* (verb) means to complete something in a way that makes it very good. Both words can also be used as nouns.

comprise/consist

Both words mean 'to be made up of', but only *consist* is accompanied by *of*.

discrete/discreet

Discrete is an adjective which means 'separate' or 'distinct'. *Discreet* is an adjective which means 'to keep silent or tactful about something'.

formerly/formally

Formerly means 'earlier'. *Formally* means 'conventionally' or 'officially'.

i.e./e.g.

i.e. is the abbreviation for *id est* which mean 'that is' or 'in other words'; *e.g.* is the abbreviation for *exempli gratia* which has the same meaning as 'for example' and 'for instance'.

its/it's

its – without an apostrophe - is a possessive determiner similar to 'my' or 'your'. *it's* is a contracted form of 'it is' or 'it has'. Note, however, that contracted forms are avoided in academic writing.

later/latter

Later is an adverb which means 'at an advanced point of time'. *Latter* is an adjective used to refer to items listed in a text. It means 'most recently mentioned'; in other words, the last item.

practice/practise

In British English, *practice* is a noun and *practise* is a verb. American English allows both spellings for both forms.

precede/proceed

Precede means 'to come before'. *Proceed* means 'to go forward' or 'to begin to carry out'.

principle/principal

Principle is a noun which means 'a basic belief, theory or rule'. *Principal* is an adjective which means 'main' or 'most important'.

there/their

There is used to indicate the existence of something. *Their* is used to indicate possession, i.e. if something belongs to someone or something.

prescribe/proscribe

Prescribe means to advise or authorise the use of something. *Proscribe* means to forbid or to restrict.

A note on British and US spelling

The most common difference which is noticed in academic writing concerns verbs which end in *ise/yse* Br. or *ize/zye* US:

- *analyse* Br. v *analyze* US.
- *industrialise* Br. v *industrialize* US.

This difference also affects the nouns derived from the verbs:

- *organisation* Br. v *organization* US.
- *globalisation* Br. v *globalization* US.

Another noticeable difference relates to words ending in *re*:

- *centre* Br. v *center* US.
- *metre* Br. v *meter* US.

Here are some other differences:

British		US
<i>aeroplane</i>		<i>airplane</i>
<i>analogue</i>		<i>analog</i>
<i>behaviour</i>		<i>behavior</i>
<i>catalogue</i>		<i>catalog</i>
<i>colour</i>		<i>color</i>
<i>connection</i>		<i>connexion</i>
<i>defence</i>		<i>defense</i>
<i>encyclopaedia</i>		<i>encyclopedia</i>
<i>foetus</i>		<i>fetus</i>
<i>instalment</i>		<i>installment</i>
<i>labour</i>		<i>labor</i>
<i>paediatric</i>		<i>pediatric</i>
<i>plough</i>		<i>plow</i>
<i>programme</i>		<i>program</i>
<i>sceptical</i>		<i>skeptical</i>
<i>skilful</i>		<i>skillful</i>
<i>travelled</i>		<i>traveled</i>

If you are writing for a British university or a British journal, you should use the British spelling.

A note on punctuation

As the purpose of punctuation is to make written English easier to read and to make the meaning clear and unambiguous, good, accurate punctuation is important in academic writing. The following notes highlight points of particular relevance to academic writing.

1. Full stop .

- To indicate the end of a sentence
- To indicate an abbreviation such as *etc.*, *et al.* (not always used)
- To indicate an omission in a quoted text [...]

2. Comma ,

- To separate long co-ordinate two main parts of a sentence joined by words such as *and*, *or*, *but*,
- To separate a dependent part of a sentence (beginning with words such as *although*, *when*, *because*) from the main part, particularly if the dependent part comes first in the sentence
- To indicate additional information, *however relevant it may be*, in a sentence (parenthesis)
- To indicate a non-defining relative clause, *which simply provides additional information*, in a sentence
- To separate items in a list such as *clauses, phrases, nouns, adjectives, and adverbs*

3. Colon :

- To introduce an explanation: *The reason the experiment failed was obvious: the equipment was faulty.*
- To introduce a list, particularly a grammatically complex list: see the example below under *semi-colon*
- To introduce a direct quotation, particularly a long one: *Jones (2003) states that: ' ' .*

4. Semi-colon ;

- To separate two sentences that are very closely connected in meaning (optional, in place of a full stop): *Some students prefer to write essays; others prefer to give presentations.*
- To separate clearly items in a grammatically complex list: *For Aristotle, motion is of four kinds: (1) motion which; (2) motion which; (3) motion which; and (4) motion which....*

5. Quotation marks ‘ ’ / “ ”

- To indicate a direct quotation
- To highlight words or phrases used in a special or unusual way: *Quotation marks are also called ‘inverted commas’.*

NB Single quotation marks now seem to be more commonly used than double. For quotations within quotations, use double quotation marks inside single (or single inside double).

6. Dash –

- Generally avoid in formal academic writing. Replace by colon, semi-colon, or brackets, as appropriate.

A note on article use

Articles use in English is a very complex area. However, there are a few simple rules which will help you in many situations and these are explained below:

1. Singular countable nouns

All singular countable nouns are always preceded by a small modifying word known in grammar as a determiner, and this is often an article (*a/an, the*). Countable words which are common in academic writing and which cause problems for non-native speakers of English, include: *system, model, method, approach, group, problem, effect, level, investigation, sector, study, participant, condition, category*

Note that even if these words are preceded by uncountable nouns or adjectives a determiner is still needed:

- *the greenhouse effect, the transport system, the control group*
- *a high level, a systematic approach, a rigorous study, an exploratory investigation*

2. Plural countable nouns

If the writer is thinking about a specific group, then the definite article is normally used: *The books in this collection were published in the 19th or early 20th century.*

Otherwise no article is used:

- *Learners tend to remember new facts when they are contextualised.*

3. Uncountable nouns

Uncountable nouns are not normally accompanied by an article:

- *Science has been defined as a systematic approach to answering questions.*
- *Reliability is an important quality of any test.*

But if they are post-modified by *of.....*, or *which ...* the definite article is normally used:

- *The science of global warming is a complex and controversial area.*
- *The reliability of this instrument is poor.*
- *Chemistry is the science which addresses the composition and behaviour of matter.*

4. Names

Names and titles are not normally preceded by the definite article (*the*)

- *Manchester University, Manchester*

But this changes if the noun phrase contains a post-modifying structure (*of ...*)

- *The University of Manchester; The United States of America*

or if they contain words like *organisation, association or institute*

- *The World Health Organisation, The American Heart Association, The Royal Society. The SETI Institute*

Apart from these simple rules, the other thing you need to do is to check how noun phrases are used in the texts that you read. Make a mental note of this as you read, or check back to the source text when you are writing.

A note on sentence structure

1. Simple sentences

In written English, all sentences contain a Subject → Verb structure. The subject always precedes the verb, except in questions where the order is reversed.

S	V
<i>An electron</i>	<i>is an elementary particle.</i>

The subject may be one word, but it is usually a group of words centred around a noun. The verb, which can indicate an action, a state, or simply serve to link the subject to other information, may also consist of more than one word. Various other sentence elements may be placed before or after the Subject → Verb structure:

S	V
<i>Between 1933 and 1945,</i>	<i>restrictions were placed on German academics.</i>

It is common for the subject to consist of many words:

S	V
<i>The information on various types of wasps and bees in the report</i>	<i>was useful to environmentalists who were fighting the use of pesticides.</i>

Sometimes, however, the subject and verb can just be one word each:

S	V
<i>It</i>	<i>is almost certain that a lower speed limit will result in fewer injuries to pedestrians.</i>

These simple sentences always end in a full stop. In academic writing, however, many sentences are more complicated than this simple pattern.

2. Complex sentences

Many sentences contain more than one Subject → Verb structure, but one of these parts will convey the main meaning and will make sense by itself:

Dependent part	Main part
S	V
<i>Although findings of recent research have shown X,</i>	<i>no controlled studies have been reported.</i>

The main part of the sentence is also known as the independent part.

The main part of the sentence can also be placed before the dependent part.

Main part		
S	V	
<i>Oral societies</i>	<i>tend to be</i>	<i>more concerned with the present</i>

Dependent part			
	S	V	
<i>whereas</i>	<i>literate societies</i>	<i>have</i>	<i>a very definite awareness of the past.</i>

The dependent part of complex sentence is usually preceded by a word or phrase such as: *although, even though, if, even if, when, because, as, since, whereas, while.*

3. Compound sentences

Some sentences may have two Subject →Verb structures and both of these convey meaning that can make sense by itself; in other words, there are two main parts. The two parts may be joined by words like *and, or, but, so,* or by using a semi-colon (;) .

S	V	
<i>Supporters of the 'Great Divide' theory</i>	<i>agree</i>	<i>that something is lost as well as gained when people become literate,</i>

S	V	
<i>they</i>	<i>consider</i>	<i>it is worth losing some benefits in order to obtain many others.</i>

but

4. Common problems relating to sentence structure

Problems occur in writing when dependent parts of sentences are written as complete sentences with a full stop:

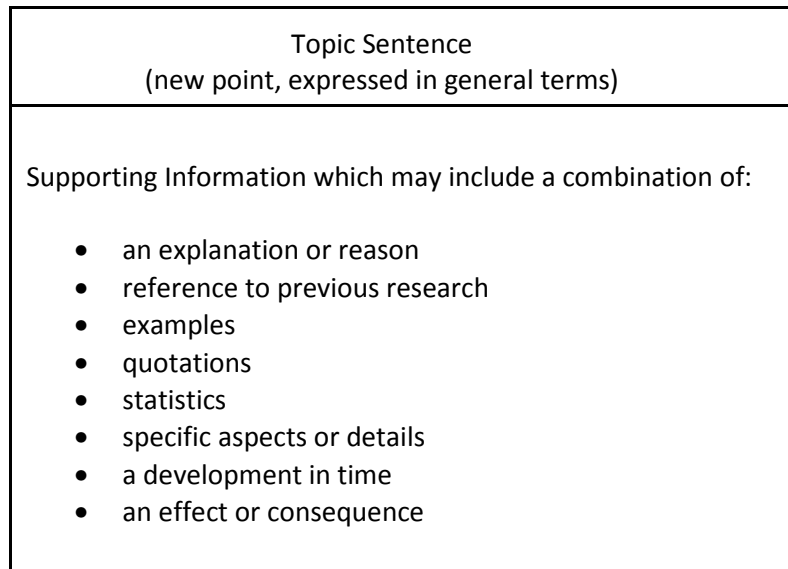

- *Whereas literate societies have a very definite awareness of the past. X*
- *Although a number of studies have been undertaken. X*

Problems also occur when two independent parts are written as one sentence without a joining word.

- *Supporters of the 'Great Divide' theory agree that something is lost as well as gained when people become literate, they consider it is worth losing some benefits in order to obtain many others. X*

A note on paragraph structure

A pattern that can be identified in many well-written paragraphs is that of a controlling idea followed by supporting information. The controlling idea, sometimes referred to as the *topic sentence*, introduces a new idea, topic, argument or piece of information into the main text. This is then either explained further or supported by subsequent sentences. This structure can be represented schematically thus:

It is important that the explanatory or supporting information in a paragraph should relate to the topic sentence. If new points or ideas are to be stated, then these should be treated in a separate paragraph. It is also important that the explanatory or supporting information should not repeat the general ideas expressed in the topic sentence.

An example of the kind of paragraph structure suggested above is given below. Note the development from the general idea to the more detailed information. Also note the thematic linking, which is signalled by the words in bold, between the sentences. Each of these words and phrases links back to an idea introduced in the previous sentence. Here, the sentences have been separated.

Many children become interested in competitive sport at early ages.

Early involvement (prior to maturity) in **competitive sport** often exposes found individuals to types of stress that may affect their growth, producing a disruption of the normal growth pattern (Wang, 1978; Al Masry, 1998).

Among cyclists the most potentially serious of **these disorders** is likely to be increased thoracic curvature.

Cycling alters the anatomical position of the spine (to a flexed position) particularly the thoracic spine, and exposes the anterior portion of the vertebral column to higher compression (Smith, 1998; Jones, 2002).

A note on the writing process

So far this document has been about 'what we write'. This final section comprises a set of notes which are concerned with 'how' we write. It is organised into a series of helpful tips. Although only two pages are devoted to these ideas, together they have the potential to make a significant difference to the quality and quantity of your written output.

Tip No. 1. The importance of planning: Research has shown that experienced writers plan extensively. Initially, planning may involve simply generating ideas and exploring the relationships between them schematically, as in the diagram to the right. At a more advanced stage of the planning process, a chapter outline of the thesis or dissertation will be necessary. This will become more detailed as you work on your study. You need to think of a writing plan as a road map. Without a map, you will probably lose your way or travel in circles.

Tip No. 2. Getting started: Many writers suffer from 'writers' block'; they find it difficult to get started. One way of overcoming this is to give yourself a short period of time (say four minutes), and without stopping, write whatever comes into your mind about the topic. The important thing to do is to keep writing, or if you are using a keyboard, to keep typing. Don't worry about spelling of grammar – just keep producing words. You will be surprised at how much text you will produce and how many ideas are generated in such a short time. Now you can begin to organise the ideas you have produced, ensuring that they are written in logically developed and grammatically correct sentences.

Tip No. 3. Be regular: You should timetable yourself so that you have a regular daily writing slot. This may seem obvious, but it is fundamental to ensuring the production of written text. Timetable a writing period each day, and aim to produce some text every time. How much you produce will vary, and what you produce, even if it is just a few paragraphs, may only be in the initial draft stage. This is not so important. The important thing is that the writing becomes a part of your daily routine. Simply getting your body to sit in front of a computer at a certain time each day will produce results.

Tip No. 4. Keep a notebook: When we are writing up a major piece of work, many ideas and insights come to us when we are not actually writing. Often, some of the most insightful ideas emerge when we are in a non-focussed cognitive state, such as when we are walking, running or swimming. Unless you can capture these ideas soon after they come to you, they may be lost. A small notebook and a pen is probably the best way to capture these thoughts before they disappear. The notebook itself can become a place where you develop the ideas and even start to formulate how the ideas will be developed in textual form.

Tip No. 5. Understand the recursive process: Writing at the academic level is not something we can do once and then leave. It is a recursive process. This means writers return to their initial texts, revising and redrafting them. This process is ongoing. In fact, many writers find it difficult to stop improving their writing, but with time being limited, they try to do as much as they can before the onset of a particular deadline. One thing we do know: successful writers write initial drafts, redraft, work on final drafts and then edit their work.

Tip No. 6. Stand back from your writing: Think of yourself as a mountain climber. Most climbers, during a climb, can only see a few feet in front of their faces. They cannot see the whole mountain. They can see other mountains, but not the one they are climbing. To do this they need to move a few kilometres away. At such a distance, they can see the route they are planning and they can see how their planned route moves up the mountain. As a writer, you should ask yourself: Is the route to the 'top' unbroken? Do all the minor 'steps' move upwards? Can the minor 'steps' be 'carried out' more clearly? The best way to create a sense of distance with your writing is with time: Leave it a few days, or longer, and come back to your writing with fresh eyes and with a better sense of the overall structure.

Tip No. 7. Read your own writing: Read what you have written back to yourself, out loud if necessary, and ask yourself: i) do I understand what I have written? ii) does it sound natural? Reading your text out loud is actually the best way of checking this. If what you have written doesn't sound right to you when you do this, it is probably badly written. One famous French writer (Gustav Flaubert) used to shout out his manuscripts before sending them off to be published. He claimed that bad writing never passed this simple test.

Tip No. 8. Talk about your writing: Writing is a very solitary activity and we tend not to talk about it to others. This is quite strange given that we spend so many hours on this activity. Asking another person to read some of what you have written and to give feedback can be a very useful experience; particularly if the feedback is reciprocal and both of you receive constructive criticism. It is worth bearing in mind that academic writers often receive their papers back from journal editors or publishers asking them to make changes. You might also consider forming a group of writers like yourself. Together you can read each other's writing and share the feedback.
